ORGANICRETE®

THE LEADING CHOICE OF CONCRETE FOR PEOPLE FOCUSED ON DURABILITY AND DESIGNER QUALITY

Unlike any concrete product available today, OrganiCrete is a specially developed designer concrete. Regionally sourced materials and recycled byproduct from manufacturing facilities are hand-selected and personally weighed within this proprietary mix.

It offsets the carbon footprint of traditional Portland concrete and uses no structural iron that can corrode and deteriorate the product. OrganiCrete is independently tested, consistently boasting high-strength, high-density properties and phenomenal flexural strengths.

FLEXURAL ASTM C-78

1 day: 1,322 PSI / 14 day: 1,911 PSI

COMPRESSIVE ASTM C-39

1 day: 3,780 PSI / 7 day: 6,505 PSI

ASR ASTM C-1567

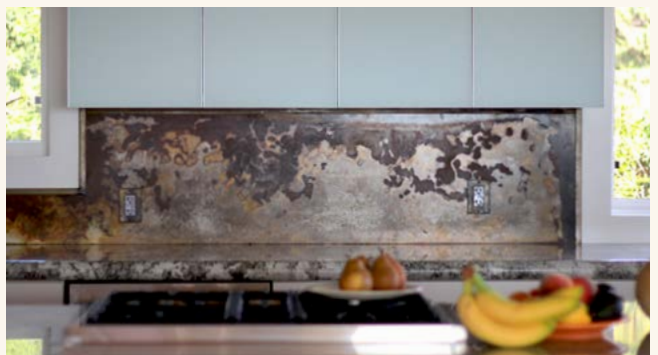

0.030% change / Passed

IRONCLAD®

METAL FINISHED IN AUTHENTIC ORGANIC BEAUTY

Ironclad is a metal alloy created through artistic techniques and processes. Steel is molded into a variety of structures that pose visually-striking textures and finishes through the application of chemicals at varying temperatures and utilizing assorted techniques to create a unique material that can never be replicated to exact specifications again. This material is used in Modern Craftsman's works of art, always keeping in mind the conditions in which it will ultimately live.
